OBJECTIVE

NEO Meta Coin - The Smart City Coin, aims to build a platform for smart city denizens to swap services & assets over safe & secure BSC blockchain smartly. NEO Meta Coin envision to become the currency of smart cities, providing denizens to transact easily for any goods & services using NEO Meta Coin.

ABSTRACT

Ever since the world has evolved the human race has always looked upon the changes. The change for betterment, the change for lifestyles and the change of mindset and psychology. The traditional financial systems had changes to various paradigms from barter system to gold trading from paper currency to online payments yet the transfer of money is always a strenuous task to get it done but still it is not free from loopholes and has always some ambiguity surrounds in and outside the perimeter of financial transaction between persons or in business or on a larger extent in cross-borders. The cryptocurrency comes up with an entire pack of solutions that makes transactions easy, effective and in an amicable way. Various developments and advances have been made since the inception of Bitcoin and Block chain and many are in progress to make this technology more viable, user friendly and accessible to all. NEO Meta Token grants users access to city services and citizenry information. Cities and citizens can use our block chain to improve how we communicate, socialize, manage our assets (both tangible and non tangible) also trade them. We also offer reduced cost and simple mechanism to achieve that.

INTRODUCTION

NEO Meta Coin the smart city coin mission is to expand the usage and availability of services built using blockchain technology, and to apply those services to cities, towns and the lives of citizens. Cities and citizens will be able to use the NEO Meta Coin to improve how they communicate, socialize, trade, and manage assets (both physical and digital). In addition, it will be possible to reduce costs and overhead, while simultaneously empowering us with all the tools we need to take the next step forward. The concept of smart cities evokes mixed feelings, somewhere between a technological dystopia and an urban utopia. 'Smart' means the use of (digital) technology and data. However, data and technologies have no intrinsic value; they are connected with destruction and survival as well.

Any human society or city, is built upon the laws of commerce and trade. It is a fundamental principle of the human condition. Without it, we wouldn't be where we are today.

Yet, the majority of trades are still done using either traditional cash payments, or through many obscure layers of financial institutions and banking. Bitcoin and blockchain technologies have in many ways disrupted how we look at the current financial institutions.

We believe in improving every citizen's quality of life. That is why we are building NEO Meta Token. The promise of Bitcoin, blockchain and other cryptos are not being leveraged in today's society. This is because existing economics, trade are tied to Fiat currencies which are centrally controlled. Everything is controlled by governments. We want to change that. While there are millions of people who hold crypto's today, their utilization is still limited, most of usage requires the exchange of bitcoin to local fiat currency that is accepted by a merchant. Gift cards, credit cards

and other solutions do help to improve this by allowing consumers to more directly exchange digital money for goods and services without an implicit exchange to fiat currency.

We believe that to realize the full potential of Bitcoin and blockchain technology we need to build solutions that work for everyone, are simple to understand, easy to use, and help both consumers and merchants alike.

We also believe that new cities will have a more open and decentralized policy for monetary exchange from the ground up. NEO Meta is one example of such city

WHY NEO Meta COIN?

NEO Meta is inspired from the concept of NEO Meta city, The NEO Meta Coin will open up a world of services that are delivered from around the world. Governments and cities services around the world have already started investigating and testing out blockchain-technologies, and there are one of many examples, from the land registry of Sweden, where they estimate blockchain-technology will cut hundreds of millions of dollars of expenses for the government. We have a north star vision for NEO Meta to be the future of decentralized currency which is having low transaction cost, is green energy oriented. NEO Meta coin will be the basic unit for any transaction happening among the Internet of things. We aim for NEO Meta to be a power of people rather than one government or one centralized authority controlling economic power; this is inherent in NEO Meta since it's built on block chain technology. NEO Meta is built around Proof of Stake which makes it secure and also protects it from 51% network attacks which happens in Bitcoin and other currencies based on Proof of Computation.

WHAT DOES IT SOLVE?

There are currently technical hurdles to getting the average individual interested in the concept and usage of cryptocurrencies. Also, there is huge potential to improve the experience of being a citizen through the implementation of blockchain solutions. Current city services are often slow, confusing, and inefficient.

In order to encourage global widespread usage of blockchain technology, it has to become the foundation and the preferred means of transaction for the majority of people. To achieve this goal, NEO Meta will develop solutions that improve and enable

- Payments should be possible using e-mail (P2M/P2MPH), SMS (P2PN/P2SMS), NFC, and using contact list without knowing, sharing or pasting any addresses.
- Perform payments with on-the-fly currency conversion.
- Merchants to quickly and easily accept NEO Meta currency as a payment method
- Merchants shouldn't be vulnerable to high transaction cost
- Property registration and details about land owned
- Trade of Tangible and Non Tangible assets

NEO Meta USE CASE IN ECONOMIC SECTOR

- Energy- unrivalled future energy system which is green energy.
-
- Technology and Digital-NEO Meta is going to be the primary currency for transacting in any technology be it IoT , be it Cloud Services, be it anything we AIM to be accepted by big IT MNC's .
- Entertainment - NEO Meta will be the primary currency for any expenses in leisure and entertainment.

- Tourism- You can use NEO Meta to rent out a hotel or purchase tourism services in a smart city.
- Sports- Creating the world's and most active population
- Health well-being and Bio tech- Automatic bill settlement via NEO Meta, Automatic settlement by insurance companies to hospitals by NEO Meta
- Design and construction – introducing the world to capital projects 2.0
- Manufacturing –will bring state of the art technologies together
- Education- a new education benchmark will be in
- Food- Agritech innovation to increase sustainability
- Internet of things- NEO Meta connects every piece of computer around the world to provide you IOT experience. NEO Meta is currency of future where the expenses of your IOT devices is managed by NEO Meta

TECHNOLOGY USED IN NEO Meta COIN

The NEO Meta coin is made up on Binance smart chain (BEP20) Static Rewards, LP Acquisition, Manual Burn

Consensus Algorithm (POS)

We utilize Proof of Stake as oppose to Proof of work which is commonly used. We do that for many reasons

- We want our NEO Meta coin to be energy efficient, We do not want our miners to make huge hardware investments which suck up power. We want to be eco friendly
- Deterministic block interval.

Accounts

Accounts on the NEO Meta work as same as any other blockchain today. We rely on 12 word recovery phrase mnemonic which will be the seed for derived public/private key pairs. You can access all your data coins and information

Payments

Performing payments on the platform will be possible in as many ways and forms as possible in order to increase adoption and usage. We will be implementing some innovative ideas such as sending funds by email.

1. Send by email

We want to enable users easily send payments via email id's itself. We will use pin based security while confirming payments

2. Send by SMS

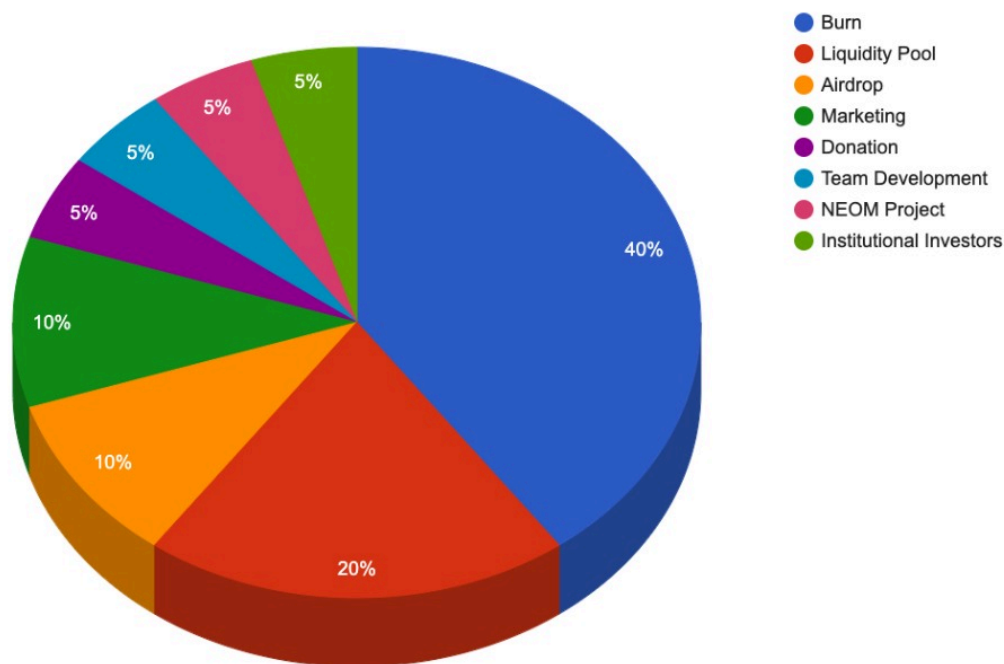

We want to enable payments by pay to number and pay via SMS.

3. Wallets

We will work with third party wallets like PayTM, Paypal etc. to make integration across platforms smooth so that you can leverage existing platforms even to make payments with NEO Meta coin.

TOKENOMICS

Total Supply

Device Coverage

We will provide cross-platform trading clients for:

- Web-based trading client
- Android native client
- iOS native client (pending App Store review)
- Mobile HTML5 client (including WeChat H5 client)
- PC (Windows) native client
- REST API

Multilingual Support

We will support English Arabic, French and Spanish on all of our user interfaces. (The very initial release will be in English and Arabic only.) More languages will be added over time.
